USA

HANDMADE IN AUSTRIA

Atomic is based in Altenmarkt in the province of Salzburg, right in the heart of the Alps, and wouldn't have it any other way. Each new development can be tested on some of the world's most challenging slopes 365 days a year – within a stone's throw of the factory.

Atomic belongs to Amer Sports Group, a sporting goods company with internationally recognized brands including Arc'teryx, Salomon, Wilson, Suunto and Precor.

SKI PRODUCTION

There are 700 experts in our main factory in Altenmarkt, Austria who work tirelessly day after day to make Atomic skis better by applying new materials and through clever innovations. And even though Atomic skis are true high-tech products today, one detail has never changed

since 1955: every ski is hand crafted with greatest care.

That means that every ski shape is milled directly from the raw material and every steel edge is individually fitted to each ski. Every layer of material is manually positioned by an

expert and then heat-bonded. After the machine grinding the skis get polished by hand and then they go into quality control. This way each ski is painstakingly created to match the skiing it's made for and to allow every skier to achieve his or her individual goals.

SUSTAINABLE DEVELOPMENT AND PRODUCTION

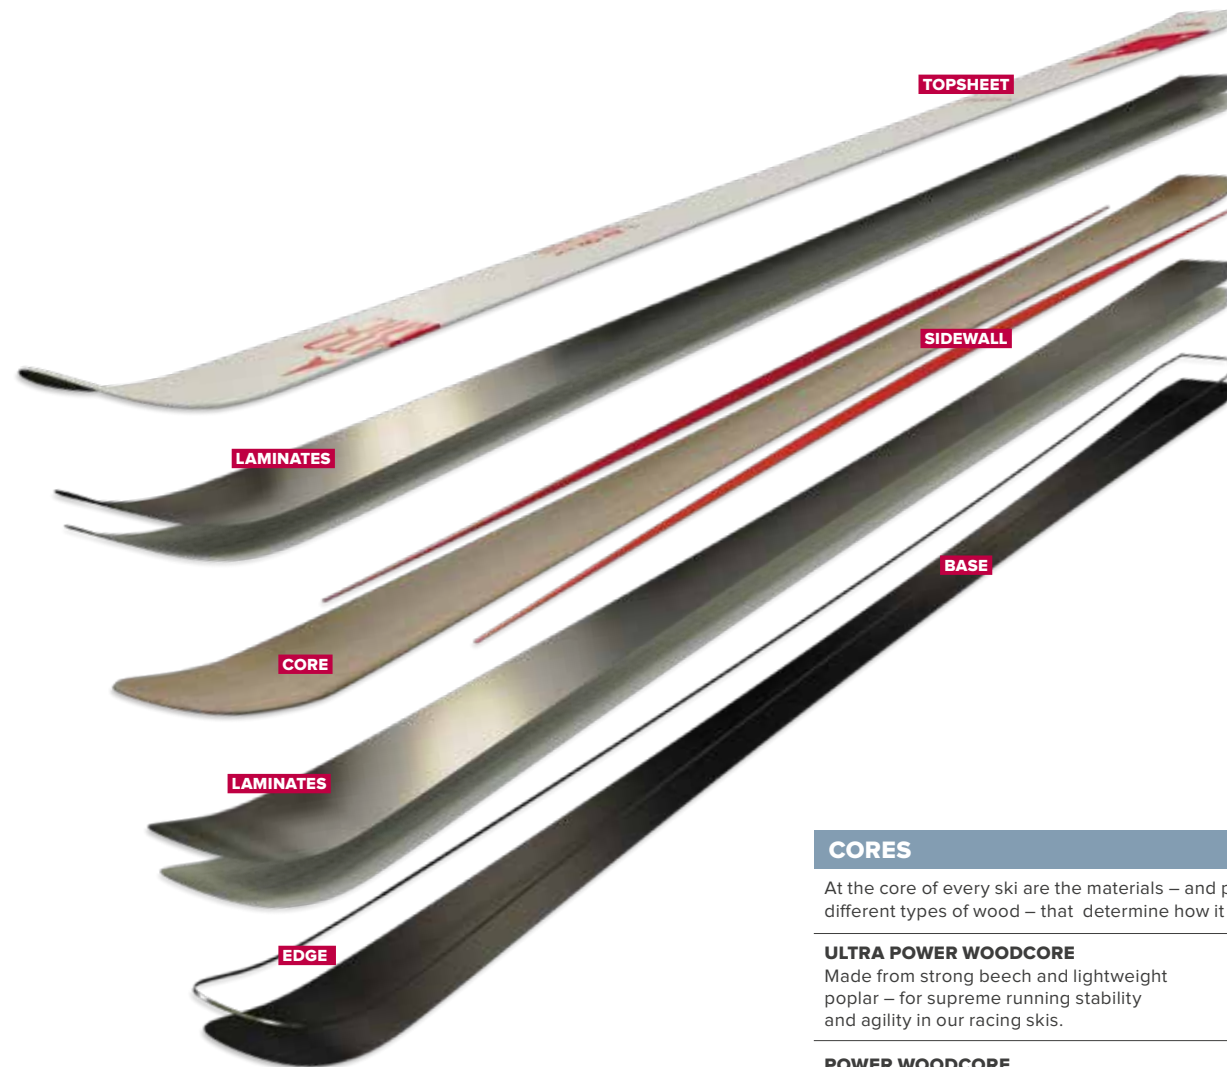

To keep the winters white Atomic and Amer Winter Sports put great focus on a sustainable factory setup in Altenmarkt. Over the past few years, Amer Winter Sports Operations has invested 1.3 million Euros in environmental and ecologically sustainable measures. Internal and external experts developed an all-encompassing environmental concept for the entire Altenmarkt site and implemented it step by step. Ecological and economic aspects are efficiently harmonized through sustainable, ecological management:

- Heating presses with woodchips as opposed to oil
- Using 100% recycled water for grinding processes
- Energy optimization through heat recovery
- Production efficiency through smart use of materials
- Further processing and utilization of process waste and residual material
- Meeting the highest environmental standards in the EU

As a recognition of these ongoing investments, Amer Winter Sports received the "Phönix 2014" waste management award. The Austrian Federal Ministry of Agriculture, Forestry, Environment and Water Management (BMLFUW) and the Austrian Water and Waste Management Association (ÖWAV) present this award to companies that are particularly innovative in the area of environmental protection and ecology.

SKI TECHNOLOGY

CORES

At the core of every ski are the materials – and particularly the different types of wood – that determine how it behaves.

ULTRA POWER WOODCORE

Made from strong beech and lightweight poplar – for supreme running stability and agility in our racing skis.

POWER WOODCORE

A combination of dynamic ash and light poplar that's stable and sporty for our high performance skis.

LIGHT WOODCORE

Made from poplar – ideal for our powder, all-mountain and freeride touring skis that need to be strong but really light.

ULTRA LIGHT WOODCORE

The poplar and caruba woodcore for skis that are all about low weight, like our touring skis.

GRAPHITE CORE

The lightweight reinforced graphite core provides stability for effortless skiing.

DENSOLITE CORE

A foam core that's agile and dampens vibrations – for effortless skiing.

BASES

We use 7000-Series sintered bases that are fast on any snow, can stand up to anything, and are easy to maintain.

EDGES

Our edges are made from steel five times more wear resistant than standard steel, for strength and perfect grip.

TOPSHEETS

Our topsheets are lightweight and highly resistant (made 50% from rapeseed oil).

PERFORMANCE TECHNOLOGY

Our skis consistently outperform other skis in their class. One reason is our constant strive for meaningful, targeted innovation that makes a genuine difference:

PROLITE

Prolite is a way of building skis and boots that turns traditional thinking on its head. Instead of starting with a standard construction and cutting material away to save weight, Prolite does the opposite. It starts with the slimmest possible profile and then it builds up reinforcements in key areas where strength is needed – like the Energy Backbone down each boot spine and ski edge.

The impact of this new construction? The lower weight saves energy and makes skiing effortless, but also more precise with a tuned-in feel for the snow underfoot. And all the strength is still there when you need it for pushing hard.

SERVOTEC

The name Servotec comes from 'Servolenkung' because that's what it is: power steering for skis! The Servotec rod on top of the ski is under tension and the elastomer connected to it under the binding is compressed. As the ski bends into a turn, the compression in this elastomer relaxes. It rebounds out like a spring pulling the rod with it. This supports the flex of the ski and makes steering lighter and quicker – like power steering. Then on straights, the rod and elastomer dampen bumps and swallow negative swings, keeping steering firm and stable when skiing straight at high speeds.

TRIPLE SIDECUT

Greater in the mid-section and straighter in tip and tail. This unique shape helps skiers slide when they need and carve when they want, making the ski feel secure and easy to control – to help skiers progress.

HIGH SPEED SIDECUT

Less sidecut means top stability at high speed – but with the feel of a more shaped ski thanks to Servotec.

MULTI RADIUS SIDECUT

The best of slalom and giant slalom combined – the sidecut for playful, agile short turns and smooth long turns in one ski.

HRZN TECH TIP & TAIL

HRZN Tech Tip & Tail takes an ABS sidewall construction and blends it with a revolutionary across-the-ski, horizontal rocker. It adds 10% more surface area in tip and tail for awesome floatation – plus less tip deflection and better tracking through chop. The ultimate design for powder skiers.

EVERYDAY ADVENTURE

We're ditching the spine lines of Alaska and the thin air of the Himalayas for something a little closer to home – ski touring in our backyard. The Backland “everyday adventure” campaign is all about showing that ski touring is something anyone can do, anywhere there's snow and a few meters of vert.

Backcountry skiers are dedicated – selecting their perfect setup, poring over maps to find new routes, skinning up at dawn to score the best snow. Our products – and our campaign – is designed to connect with those people. This isn't about the super pros. It's about the guys who grab a session

before work, after work, and simply whenever they can. We want to make ski touring accessible. Backland products make it easier to integrate a Backland adventure into your everyday life. So sometimes an everyday adventure and using every opportunity is what makes you a better skier.

PERFORMANCE MEETS STYLE

Whatever your level of skiing, knowing you're getting better is such a great feeling. Cloud is one of the best-selling women's piste ski lines of all time – an enjoyable, confidence-boosting, beautiful ski with models tailored to every level of skier. Each ski features Cloud's elegant monochrome graphics, and each one is continuously upgraded with the latest Atomic innovation tested by our Atomic women's team. Meaning year after year Cloud offers an even better mix of performance and style. An epic ski that's constantly improving. So every skier can too.

CLOUD SKI

HOW CLOUD MAKES YOU A BETTER SKIER:

Boost your confidence

The totally refined construction with a new Flite Woodcore is even lighter and stronger. Boosting confidence in all piste conditions.

Your style, your ski

Choose the model to suit you, with Cloud's trademark punched topsheet and the perfect balance of performance and style.

Feel the flow

Servotec acts like power steering for skis – for graceful, flowing, confident skiing.

BINDING FEATURES

STEP-IN AID

Our patented step-in aid guides your boot perfectly into position.

EASY CLIMBING AIDS

The climbing aids work separately from the heel tower. This means they can be folded forward into any heel-rotation position. With a flick of your pole, you have hassle-free and easy switching between the three climbing positions.

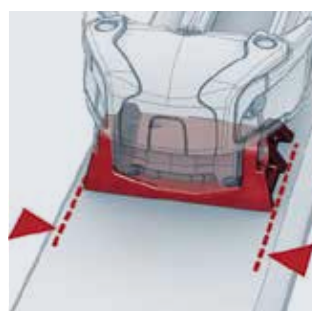

TOURING BRAKES

Our light, strong brakes feature a unique lock/unlock system that helps you switch easily from hike to ski mode, and guards against you skiing with a locked brake.

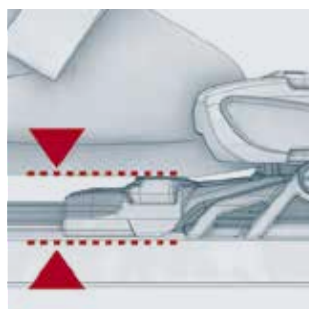

OVERSIZED PLATFORM

A super-wide platform allows for maximum lateral power transmission. We also have different platforms with different widths to choose from.

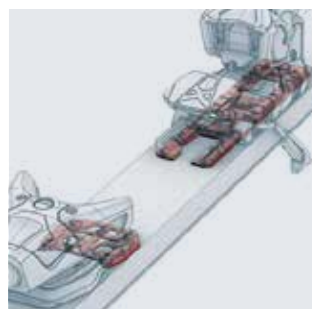

LOW-PROFILE CHASSIS

The low stand height increases your feel for the terrain, and also enhances power transmission to the ski.

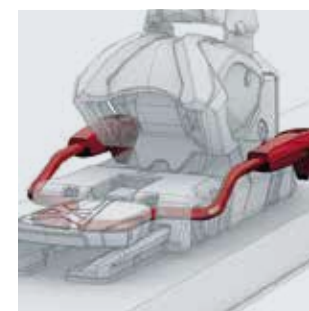

PROGRESSIVE TRANSFER PADS

Special inserts in the toe and heel increase dampening and forgiveness.

FREESKI BRAKES

Self retracting brakes, adapted to modern skis and practices, eliminate hang ups on switch landings.

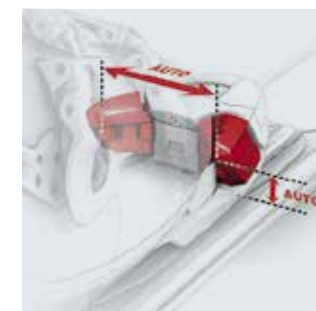

STOMP PEDAL

A fixed, wide pedal ensures the best transmission from skier to ski.

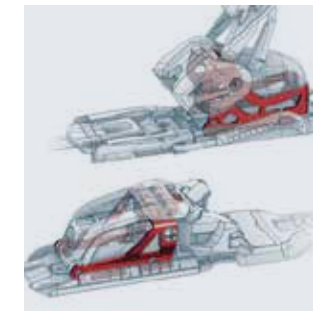

AUTOMATIC WING ADJUSTMENT

Adapts automatically and easily to your boot width and height. It also keeps release values constant for worn out boots.

FORCE CAGE TRANSFER (FCT)

Our top race bindings feature a steel reinforcement cage at the toe and heel piece for maximum power transfer.

EDGE GRIP ALIGNMENT (EGA)

Fine-tune the position of your binding 2 mm each side to adapt to your body movement and skiing style.

VARIABLE POSITIONING (VAR)

Move your toe and heel along the rail to customize your position forward or back on the ski.

SOLES AND NORMS / GRIPWALK

SOLES AND NORMS

Technology has come a long way on the soles of ski boots. Our range features different types of grip pads, each designed for a specific use.

ALPINE DIN

These are the traditional flatter alpine soles you'll see on most standard boots. They follow ISO 5355 and work safely with traditional alpine bindings following ISO 9462.

TOURING

Certified Touring Grip Pads follow ISO 9523. They have a rockered toe and lugged rubber soles allowing you to walk more naturally and improve grip on tricky surfaces. Boots with ISO 9523 soles are not compatible with traditional Alpine DIN bindings – even if they fit, the release values may not be consistent. So only use

GRIPWALK

GripWalk is a sole/binding system that makes walking in ski boots significantly more comfortable, while also reducing the chances of slipping. Yet the GripWalk system also guarantees outstanding on-snow performance. The GripWalk grip pad features a rockered profile that supports the natural rolling motion of the foot. Composed from a special rubber mix and a clever ribbed profile, boots with the technology effectively reduce slipping on any surface, from wet tiles in ski lodges to icy parking lots.

these boots with bindings that are approved for boots following ISO 9523.

TOURING NON-NORM/ TLT-BINDING-ONLY

It is important to note that many touring boots on the market, including Backland, are not in accordance with the Touring Norm or other established boot norms. In order to save weight and provide a more rockered sole for easier walking, these boots lack the traditional toe and heel lugs required to fit into touring frame bindings and “Multi Norm Certified” alpine bindings. As such, all Backland boots are only compatible with TLT-style pin bindings that use pins at both the toe and heel.

BOOTS THAT FIT

We wanted to create a ski boot that helps any skier be a better skier. Most important? A boot that fits – and the Hawx is a ski boot with perfect fit. Step into them and you'll feel right at home, no matter if you've got small, average or big feet – it's a complete range that includes narrow, medium and wide fit options. That's why Hawx is one of the best-selling boot series in the world.

**BEST OF
ALPINE
BEST OF
BACKCOUNTRY**

Hawx has been a mainstay for All Mountain skiers for years. With the success of the Hawx Ultra XTD, we used this blueprint to build the Hawx Prime XTD – a boot that can do it all. Our market-leading 100mm-lasting boot features our brand new Mimic liner, a uniquely customizable liner that offers

the ultimate in comfort and fit. The Hawx Prime XTD offers ski-and-walk Free/Lock technology for all-around range of movement. Alpine performance with comfort and mobility – a boot this functional makes you a better skier.

HAWX PRIME XTD BOOT

HOW HAWX PRIME XTD MAKES YOU A BETTER SKIER:

Best of Alpine

The innovative Hawx Prime XTD is developed on the blueprint of our best-selling Hawx Prime – so it offers excellent alpine performance. The new, uniquely customizable Mimic liner shapes exactly to your foot – and offers the ultimate in comfort and fit.

Best of Backcountry

The Hawx Prime XTD's Free/Lock system and Frictionless Pivot offer incredible uphill mobility and 54° range of motion. It's built to let you move all over the mountain.

HAWX PRIME XTD 130 TECH GW

MIMIC LINER

HOW MIMIC MAKES YOU A BETTER SKIER:

From first fit ...

This is a boot that feels right from the very start. An anatomically pre-shaped heel and ankle area comfortably secures the foot the moment a skier steps into the boot – and it's only going to get better.

... to your fit.

The heel, ankle and tongue feature a layer of supportive, heat-moldable material. After being softened in the oven, this material mimics the precise shape of your foot, and hardens in that shape for a perfect custom fit.

It's the easy way

The heat-molding process is quick and easy, mess-free and repeatable – giving every boot-fitter the chance to make their customer's day – or entire ski season – with a fit that's as perfect as can be.

MIMIC LINER

THE LEGENDARY HAWX FEEL

HAWX ULTRA
98mm NARROW FIT

HAWX PRIME
100mm MEDIUM FIT

HAWX MAGNA

- 1 Waist:** Measure the circumference of your waist at your natural waistline, which is located above your belly button and below your rib cage.
- 2 Chest:** The circumference of your chest is measured under your armpits, around your shoulder blades, and back to the front.
- 3 Hip:** Hip is measured at your widest point around the hip.
- 4 Sleeve length:** Measure from middle back to wrist (upper side of the sleeve).
- 5 Inseam pant:** Measure from the top of your leg to the end of your leg (inside of the leg).

NOTES

This image shows a single page from a notebook or ledger. It features horizontal ruling lines spaced evenly down the length of the page. The top portion of the page contains faint, illegible markings that appear to be bleed-through from another document. The remainder of the page is clean white space between the blue-lined rows.
