NORDICA'S HISTORY

- 1939** Adriano and Oddone Vaccari founded Nordica in Montebelluna, Italy.
- 1950** Nordica develops and builds its first Athlete inspired boot named the Zeno Colo Olympic after the successful skier.
- 1963** Nordica is the first ski boot producer to introduce the "buckle" fastening system.
- 1967** Nordica pioneers the production of boots composed of plastic.
- 1974** Nordica sets up its first affiliate in the United States. Other affiliates open in Austria, Japan, Switzerland, France, and Germany. Nordica accounts for 30 percent of ski boot production in the world.
- 1999** Nordica's highly regarded Research and Development Race Department unleashes the infamous Dobermann boot.
- 2000** Fresh out of the press, the Nordica Ski is introduced to the snow sport market.
- 2014** Nordica wins it's fourth straight World Cup Manufacturers Slalom Title.
- 2015** Nordica Dobermann GP 130 wins ISPO Award.

GPX SERIES

LEGENDARY PERFORMANCE. REDEFINED FIT

A truly great boot design is ultimately defined by the integration of both Fit and Performance. Developing a Nordica boot with a better Fit that has greater performance launched one of the most significant design and engineering efforts since we created the original Grand Prix. With the GPX we have taken the time to do the deep engineering to design and develop an entirely new high performance ski boot that offers more than just new shapes and colors. A ski boot design has never been so balanced, undoubtedly making this the largest advancement in all mountain high performance ski boots since we launched the original Grand Prix over 30 years ago.

LINER WITH CORK FIT TECHNOLOGY

Building on the natural performance characteristics of cork, Nordica continues to push the envelope on striking the perfect balance between comfort, performance and customization with its award winning liners. The all handstitched construction features a custom cork adaptive zone shape and a congruent heel construction. These qualities coupled with an exclusive primaloft lining and foot bed keeps your feet warmer, drier and more comfortable, making your time on the mountain more enjoyable.

CORK CUSTOMIZATION TECHNOLOGY
DIRECT POWER TRANSMISSION
+ COMFORT + WARMTH

NORDICA GRIPWALK SOLES (AFTERMARKET PARTS KIT)

Today's skier demands a ski boot that is more and more comfortable and offers technologies that make walking in their boots easier than ever before. Nordica Gripwalk® aftermarket sole kit offers an easy walking rocker sole interface that is ready to fit into the new marker Gripwalk® bindings and other similar systems available in the market.

PRIMALOFT®

**PRIMALOFT® IS FEATURED EXCLUSIVELY IN
THE 2017 BOOT LINEUP.**

Enjoy unmatched warmth with Primaloft engineered into our ski boots. The benchmark in performance of all synthetic insulations.

WOMEN'S SPECIFIC FIT

To ensure we continue to offer the perfect level of performance and comfort in each boot we design. We've engineered the GPX women's series to meet the particular biomechanical shape of a woman's lower leg. Both the liner and cuff have their own women's specific construction to optimize both on snow comfort and control that heighten the all mountain experience.

IT' BACK. IT'S BETTER.

THE ALL NEW SPEEDMACHINE®

THE PERFECT BALANCE OF PERFORMANCE, MODERN TECHNOLOGY, AND TIMELESS DESIGN

Creating beautiful products that are as simple and pure as they are functional has always been our goal at Nordica. We designed the Speedmachine as a collection of boots, with unparalleled fit, performance and customizable capabilities that we are now at a compelling beginning, where modern boot technology is truly improving the on mountain experience.

SHELL LINER COMPONENTS
100% CUSTOMIZABLE

TRI-FIT CUSTOMIZATION MODERN, LIGHT, 100% CUSTOMIZABLE

Tri-Fit Customization is the next level in truly personalizing ski boots. By focusing on the shell, the liner and the key hardware components, we were able to create an easy to use technology that seamlessly and comfortably connects the foot with the liner and shell. The key to unlocking this technology is our Infrared Shell Customization Heating Element used in conjunction with our Nordica Custom Cork Liner system and oven. These two technologies allow 100% customization of both the liner and boot shell only in the areas where it's needed to achieve to the perfect fitting ski boot.

LINER CUSTOMIZATION CUSTOM CORK FIT TECHNOLOGY CUSTOMIZABLE LINER FOR PERFECT FIT

Engineered with the combination of a natural cork compound and a pre-molded 3D laminate, our Custom Cork Liners create the perfect balance of comfort and performance while being completely customizable.

COMPONENTS HAND WORK MADE EASY

To make hand work and traditional boot fitting methods such as punching a grinding as easy as possible we use removable hardware components and PU plastic wherever possible.

INFRARED NORDICA SHELL CUSTOMIZATION TECHNOLOGY

The true key in creating a custom boot design is not whether you can manipulate the natural form of a boots shell, but rather to create a boot design that can easily and effectively deliver the proper level of modifications, in critical areas, that will benefit not only the fit of the boot but also enhance its on snow performance and feel. For this reason, we developed our Infrared Heating Element and our Tri-Force shell. We saw the need to create a boot design and a customization technology that would work together to deliver the perfect amount of customization only to areas of the shell where it's needed. We also saw the need to create a system that was accurate and easy to use, saving time and eliminating mistakes. The key component in achieving this is the Infrared Heating lamp, heating the plastic of the boot quickly from the inside out, at a right temperature. This allows the boot to remain undamaged by the heating element and for the customization to take a permanently defined shape.

BENEFITS

- FAST & SIMPLE
- INFRARED HEATING = NO SHELL DAMAGE
- TARGETS CUSTOMIZATION ONLY WHERE ITS NEEDED

INFRARED SHELL FIT TECHNOLOGY PROCEDURE

1. Step in the boot
2. Highlight the pressure points on boot
3. Step out of the boot
4. Remove the liner
5. Heat the area with the infrared lamp (6 min)

6. Replace the liner
7. Apply the suction cup element on warm area and start process until the pressure is neutralized (3 min max)
8. Remove the suction cup element and step in the boot

N-MOVE / NXT SERIES

NEW N-MOVE COLLECTION

PERFORMANCE ON AND OFF THE SLOPES

Nordica is driven by providing skiers with products that advance their all mountain adventures. The all new N-Move collection of boots falls nothing short of that vision. Comfort, warmth and accessibility in an all mountain sport performance ski boot is now more realistic than ever before. Utilizing technologies such as ski and walk systems, Primaloft liner materials and GripWalk compatible soles, all make the N-Move an all mountain boot that you can take to the next level.

NORDICA GRIPWALK SOLES (AFTERMARKET PARTS KIT)

Today's skier demands a ski boot that is more and more comfortable and offers technologies that make walking in their boots easier than ever before. Nordica Gripwalk® aftermarket sole kit offers an easy walking rocker sole interface that is ready to fit into the new marker Gripwalk® bindings and other similar systems available in the market.

NXT COLLECTION

ALL MOUNTAIN BOOTS FOR THE GO-ANYWHERE, SKI ANYTHING SKIER.

The ultimate in comfort, performance and fit, nordica's new NXT collection is the next level in all mountain boots. Easy to fit, completely adjustable, with the kind of on-snow control sport skiers dream of, each boot is also designed to be incredibly easy to get on and off. Phenomenal features at an unmatched value are the hallmark of this new generation of boots.

ADJUSTABLE CUFF PROFILE

Our New Adjustable Cuff Profile Mechanism (ACP) allows with only one movement a neutral standing position for every leg size, making skiing all day easier and more comfortable no matter what the width of a skier's leg. Improves width respected previous mechanism.

WEATHER SHIELD

The weather shield is an overlap system integrated into the shell that provides a full waterproof feature to prevent water from leaking into the boot. And as we all know, dry feet are warm and comfortable feet!

PRIMALOFT®

Enjoy unmatched warmth with Primaloft engineered into our ski boots. The benchmark in performance of all synthetic insulations.

**ALL
MOUNTAIN**
SKI COLLECTION

NRGY & BELLE SERIES

NRGY

The NRGy collection features some of the most modern and versatile all mountain skis on the mountain. With a lightweight i-Core Ti with Torsion Bridge construction, each ski offers incredible performance and control at a lighter weight. Built with all mountain camrock, each NRGy excels on hard pack groomers, bumps, crud, trees, or pow, providing a new level of confidence wherever your skis may take you.

I-CORE TI WITH TORSION BRIDGE

I-Core Ti with Torsion Bridge technology has allowed us to build the next generation of All Mountain skis. By removing specifically engineered geometric shapes from a full sheet of Tital, the Torsion Bridge provides our NRGy skis with the performance of metal without the extra weight and sluggishness that typically comes with a traditionally constructed metal ski. Combining this torsion bridge technology with our poplar/beech wood core, results in a construction that is extremely lightweight yet torsionally strong and confidence inspiring in all conditions and terrain.

NRGY SERIES TECHNOLOGY

I-CORE TORSION BRIDGE TI

The confidence of metal without all of the excess sluggish weight.

NRGY TIP:

The tip has a new modern shape with a little relief on either side that makes the ski super playful and easy to steer in soft snow.

NRGY TAIL:

We've introduced a new tapered tail with a little rocker to make the skis really maneuverable off piste yet strong and powerful on hard pack.

BELLE

For women who seek the perfect balance of lightness and performance, the Nordica Belle series was designed from the ground up with the specific needs of women in mind. This series features a wood core designed to reduce weight and stiffness making these skis nimble and stable. The Belle series delivers what women want in an all mountain ski—lightness, versatility and performance.

BALSALAM CORE TECHNOLOGY A MICROLAM DESIGNED EXCLUSIVELY FOR WOMEN

BELLE SERIES CONSTRUCTIONS

BALSALAM CORE CA

The Balsa Core is a microlam construction made up of many thin balsa wood stringers stacked side by side, which provide a strong and damp metal like feeling at an extremely light weight. This damp feeling allows skiers to rip through any conditions.

MASTER THE SLOPES

The GT series brings a new level of high performance and lightweight versatility to the All Mountain Performance category. Designed for hard snow enthusiasts, these skis offer maximum power and edge grip with the ability to carve through it all effortlessly. From the early morning corduroy to the afternoon crud, the new GT series provides a smooth and stable ride wherever you choose to ski.

NEW DUAL TORSION BRIDGE TECHNOLOGY A LIGHTWEIGHT HIGH PERFORMANCE CONSTRUCTION

By adding torsion bridge technology to both the top and bottom of the core, you get World Cup like power at an easy to maneuver weight.

TORSION BRIDGE IS A FULL SHEET OF TITANAL WITH VERY SPECIFIC GEOMETRIC SHAPES REMOVED, PROVIDING THE TORSIONAL STRENGTH AND DAMPENING BENEFITS OF METAL WITHOUT ALL OF THE SLUGGISH WEIGHT.

SKIING BENEFITS

- HIGH PERFORMANCE
- STABILITY
- LIGHT WEIGHT
- SPEED

GT SERIES CONSTRUCTIONS

ENERGY 2 TITANIUM TORSION BRIDGE

A lightweight high performance construction made up of a wood core sandwiched between two titanal torsion bridges. The power and confidence of metal at a lighter weight.

ENERGY TI

A lightweight full sidewall construction utilizing two wood stringers and a sheet of Titinal for max performance, stability, and torsion resistance in a variety of conditions.

ENERGY 2 CARBON

Full wood core with two sheets of carbon over the edges. High performance sandwich construction at an affordable price. Confident stability and edge grip with a smooth and forgiving feel.

ENERGY FRAME CA WOOD PARTIAL SIDEWALL

Offers a technology for advanced skiers who are looking to enjoy a long day of skiing while using minimal energy. The partial sidewall combines an easygoing cap construction in the tip and tail with an ABS sidewall under the foot for maximum edge grip during on piste skiing. In addition, this construction has two stringers of wood and a CA layer that makes these skis very easy to handle while not giving up any stability.

ENERGY FRAME CA WOOD

Offers a construction that is designed for people who are looking for an easy, confidence building ride. With two wood stringers and several layers of CA, this construction makes it easy for skiers to stay in balance even if they are not stable throughout the turn.

RUNNING BASE

Designed for the on trail enthusiast looking for smooth and effortless all day carving. The Sentra series brings new light to the term high performance. Superior power and edge grip for hard snow stability with a lightweight and playful attitude, these skis are sure to give you confidence wherever your adventures may take you.

WOMEN'S HIGH PERFORMANCE MEETS THE POWER OF BALSA

BALSA CORE LIGHTWEIGHT TECHNOLOGY

- Fastest growing hardwood in the world.
- Highest strength to weight ratio of any hardwood.
- Cell geometry provides shock absorption, giving damp metal like performance.
- Strong and light structure due to extremely large cells and thin cell walls.
- 60% Air (cells) and 40% solid material (cell walls).

A MICROLAM DESIGNED EXCLUSIVELY FOR WOMEN

The Balsa Core is a microlam construction made up of many thin balsa wood stringers stacked side by side, which provide a strong and damp metal like feeling at an extremely light weight. This damp feeling is what gives skiers confidence when pushing a ski to its limits, and it's what provides that extra level of edge grip when snow conditions get firm.

SKIING BENEFITS

- HIGH PERFORMANCE
- STABILITY
- LIGHT WEIGHT

Built with the same passion for innovation as our riders who ski these products everyday, the Freeski category is all about performance, durability, and playfulness.

FREESKI SERIES CONSTRUCTIONS

ENERGY 2 TITANIUM

World Cup technology full wood core with two sheets of metal over the edges. Top end power transmission, torsional stability, and edge grip.

ENERGY 2 CARBON

Full wood core with two sheets of carbon over the edges. High performance sandwich construction at an affordable price. Confident stability and edge grip with a smooth and forgiving feel.

BALSA CORE CA

A Microlam designed exclusively for women.

ENFORCER

ALL MOUNTAIN CAMROCK PROFILE

- NEW PATRON INSPIRED BLUNT NOSE TIP AND TAIL SHAPE
- IMPROVED FLOTATION IN SOFT SNOW AND POWERFUL TURN INITIATION ON HARDPACK
- TRADITIONAL CAMBER UNDER FOOT
- EARLY RISE ROCKER TIP AND TAIL

SMOOTH, POWERFUL, AND PLAYFUL

POWDER

Powder camROCK! skis are built to ski powder in ways never before thought possible. With significant rocker in the tip and tail, these skis float effortlessly. By retaining a bit of camber under foot, they are still exceptionally stable and track comfortably in all snow conditions. The very low, broad, "Hammerhead Nose" design maximizes on-edge snow contact while reducing unstable tip vibration that is a common in other rockered skis.

ALL MOUNTAIN ENFORCER - SANTA ANA

All Mountain camROCK! Technology pulls the traditional contact point of the tip back about 25% and the tail 5% creating slight tip and tail rocker to aid the camber under foot. The result - increased floatation, velocity and maneuverability in soft snow as well as significantly increased ease of turn initiation in any condition.

ALL MOUNTAIN SOUL RIDER

All Mountain Soul Rider camROCK! Technology pulls the traditional contact point of the tip back about 25% and the tail 20% creating slight tip and tail rocker to aid the camber under foot. The result - increased floatation, velocity and maneuverability in soft snow as well as significantly increased ease of turn initiation in any condition.

CARBON RACE BRIDGE
TECHNOLOGY

With the likes of World Cup superstars Felix Neureuther, Dominik Paris, and Fritz Dopfer helping aid the direction of our R&D team, we introduce the new Dobermann series of skis. The fastest and most powerful line in the Nordica collection. With the introduction of our new carbon race bridge for increased torsional stability and power, you can plan on dominating the hard snow terrain with a new level of confidence and speed.

NEW CARBON RACE BRIDGE TECHNOLOGY

TAKING STABILITY AND POWER TO A NEW LEVEL

THE POWER OF CARBON

Carbon Race Bridge technology in tip and tail ensures greater torsional resistance, top end power transmission, unbeatable stability and edge grip.

- MAXIMIZED ENERGY TRANSMISSION
- INCREASED TORSIONAL RIGIDITY
- BETTER EFFICIENCY OF THE SKI STRUCTURE

SKIING BENEFITS

- EFFORTLESS TURN INITIATION
- QUICK AND SMOOTH TRANSITIONS
- INCREASED TORSIONAL RESISTANCE FOR STABILITY
- PRECISION AND EDGE GRIP
- SPEED AND POWER

DOBERMANN SERIES CONSTRUCTIONS

ENERGY 2 TITANIUM RACE BRIDGE

World Cup technology full wood core with two sheets of metal over the edges. Carbon race bridge technology in tip and tail ensures greater torsional resistance, top end power transmission, and unbeatable stability and edge grip.

ENERGY 2 TITANIUM

World Cup technology full wood core with two sheets of metal over the edges. Top end power transmission, torsional stability, and edge grip.
