Snowsport helmets, when sized and fitted properly, can reduce the risk of injuries to those parts of the head that are covered by the helmet, but no helmet can protect the wearer against all foreseeable impacts or injuries. Skiing and snowboarding will expose the user to forces that exceed the limits of protection provided by any helmet, and serious injury or death can result from both low and high-energy impacts, even when a helmet is worn. Never use a helmet that has sustained a significant impact or that appears to be damaged, because damage may compromise the effectiveness of that helmet.
