SKIS
WINTER
20/21

ROXY SKIS 20/21

Inspired by Mother Nature, the Roxy Hardgoods range will help you harness the elements for the ride of your life. The fiercest storms yield the deepest powder and the 20/21 Roxy Ski collection provides you the tools to ski your best self on the mountain this winter.

Our three different ski lines have been engineered for performance. The Shima, Dreamcatcher and Kaya will let you take it all on, from the wide-open spaces of freeride skiing, to making your mark on piste and in the park.

CONSTRUCTION

FULL CAP

With Full Cap construction, there is no need for sidewalls in the ski. Instead, the topsheet wraps around and meets directly with the ski's edges, protecting the fragile join that can be prone to chipping. No sidewalls mean a lighter ski that looks fresher for longer.

FULL SIDEWALL

Sidewall construction is a traditional manufacturing method that places strips of protective material along the sides of each core, between the metal edge and the topsheet. Sidewalls provide the best possible edge hold and stability when the ski is engaged in a turn.

SEMI-SANDWICH

All the benefits of sidewall construction underfoot, with a cap construction in the tip and tail. Cap construction requires no sidewall as the topsheet wraps around fully to the edge, adding durability from impacts and other damage as well as reducing the overall weight of the ski.

CAMBERLINES

PISTE ROCKER

The perfect rocker shape for slope cruising. The very slight early rise in the tip means seamless turn initiation and no unwanted edge-catching.

ALL-MOUNTAIN ROCKER

For all snow conditions and any terrain, both on and off-piste. An early rise either just in the tip, or in both tip and tail, makes this rocker camberline a versatile option for skiers who want to go everywhere.

PARK ROCKER

Designed for the stability and playfulness skiers need in the park. With a slight early rise in the tip and tail to allow for butters and confident landings.

CORE

POPLAR

Poplar is a medium-weight, damp, vibration-absorbing softwood. Used as a ski core, Poplar feels light and fun while always remaining dependable and durable.

POPLAR/BEECH

Poplar is a softwood that saves weight and has absorbent qualities that increase the ski's dampness, while beech is a hardwood that provides strength and pop, for a playful, responsive ski.

FREERIDE ROCKER

The most pronounced rocker we have in tip and tail, combined with camber underfoot for awesome flotation in deep powder.

DREAM CATCHER

When your dreams of bluebird skies,
glistening slopes, and laughter-filled
chairlifts become reality,
the Dreamcatcher Series is at your side.

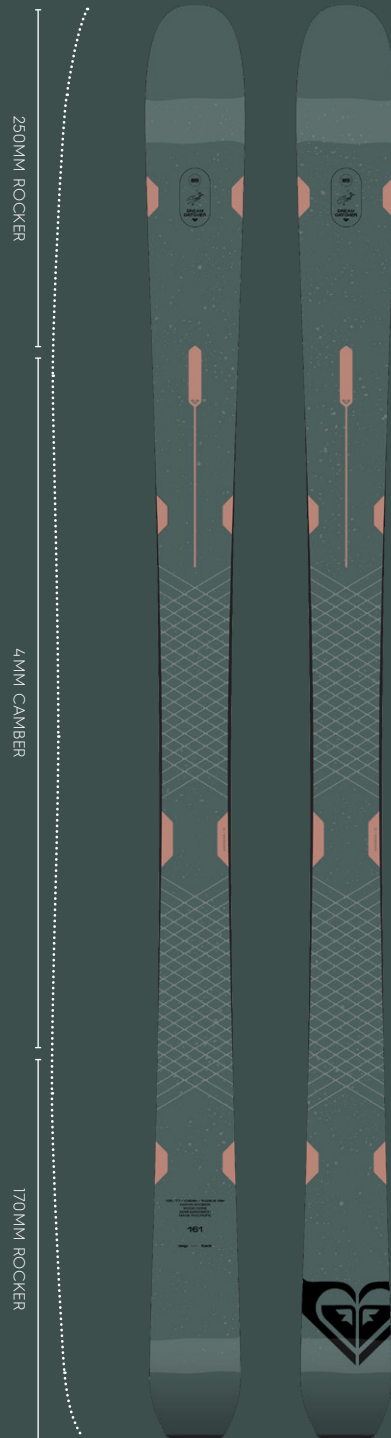

A range of all-mountain skis for all
kinds of fun, revel in new experiences
and turn heads wherever you go.

Dream big – go anywhere.

DREAMCATCHER 85

Ride like the wind

From fresh groomers, to untracked snow, the Dreamcatcher 85 will keep you keen to explore the mountain. Dependable and durable with a lightweight poplar wood core, the 85's construction has a great grip on firm snow and absorbs unwanted bumps and vibrations. The 85's construction has a great grip on firm snow and absorbs unwanted bumps and vibrations. The 85mm waist and All-Mountain Rocker easily handle whatever the mountain dishes up, giving you the ride of your dreams.
